Counter Channel

The wheelchair-accessible counter has been retrofitted, counter staff have completed accessibility-interaction training, and queue calls now include audio and captions. The counter channel passes.

Online Gap 1: Identity-Verification Video

The identity-verification video call has no captioning or interpreter option, so Deaf or hard-of-hearing applicants cannot complete the video step independently.

Online Gap 2: Document Upload

The document-upload button lacks a screen-reader text alternative, so applicants using a screen reader cannot confirm whether they successfully activated the upload control.

Conclusion

Conclusion: the counter channel passes, but the online portal has two independent, unresolved gaps, so the service as a whole cannot yet be called “fully accessible.” The two online gaps are independent and each needs its own control — one fix cannot cover both.
