

SERVICE BULLETIN NW350-28-1142

Northwind Aerospace · NW-350 series · ATA 28 Fuel System

Bulletin number	NW350-28-1142
Issue date	2026-09-28
Revision	Original
ATA chapter	28-41
Category	Recommended
Compliance	Within 180 calendar days of issue

1. Planning information

This bulletin covers replacement of the fuel boost pump electrical connector on NW-350 series aircraft.

In-service reports indicate that connectors from certain lots (part number 28-4471-03) may develop contact fretting in high-humidity environments, producing intermittent fuel boost pump failure indications.

This bulletin does not affect continued airworthiness. Operators are nevertheless advised to comply within the stated period to limit dispatch reliability impact.

2. Effectivity

Model: all NW-350 series aircraft.

Manufacturer serial numbers: MSN 5001 through 5400.

Affected component: part number 28-4471-03, serial numbers A1200 through A1899.

Aircraft modified in accordance with mod kit NW-350-M0742 are not affected by this bulletin.

3. Notes on determining applicability

The MSN range reflects the build standard at delivery from the manufacturer.

■ ■ Where a component listed in this bulletin has been replaced, applicability must be determined from the serial number of the component currently installed. An aircraft whose MSN falls outside the range above may still be affected if a component within the affected serial range is installed.

■ ■ Conversely, an aircraft whose MSN falls inside the range is not affected if the mod kit has been embodied.

Operators must check both the mod kit embodiment record and the component serial number.

4. Summary of work

Remove the existing fuel boost pump electrical connector and install the improved connector in accordance with the maintenance manual.

Estimated 3.5 man-hours per connector; two connectors per aircraft.

A fuel boost pump functional test is required on completion and must be entered in the aircraft technical log.

This document is a fictitious example for training purposes. Northwind Aerospace is a fictitious manufacturer.
